

Now is the time to start thinking about what you're going to do with your life.

DID YOU KNOW?

Apprenticeship is hands-on training for people who enjoy learning by doing and want to work in a skilled trade. Apprentices are paid while gaining work experience, and their wages increase with their level of skill.

Training provides access to well-paying jobs in skilled trades that demand a high level of skill, judgment and creativity. As a certified skilled worker, your knowledge can lead to a wide range of opportunities, such as working for employers in different parts of Canada, being your own boss or teaching.

About 80 per cent of apprenticeship training is provided in the workplace by employers. The remainder involves classroom instruction on theory, usually given at a local community college or provided by another approved training organization.

YOUR FUTURE AS A:
Control Technician

What is this career all about?

Control Technicians spend a large portion of their day inspecting, maintaining and repairing instrumentation, electronics or electrical equipment. They also perform diagnostic and maintenance routines. Control Technicians may also be asked to train new team members, so they need to be comfortable communicating and working confidently and safely with others. Some days will require several hours of paperwork, which is repetitive but essential to the success and safety of everyone. Control Technicians must be willing to work eight, ten or twelve-hour shift work and they'll need to be comfortable being on duty at any hour of the day.

Why wear the plastic suits?

Safety is our first priority. Protective equipment and clothing are provided and required at all times. Some of the equipment and clothing can be heavy or feel restrictive (i.e., plastic suits and respirators), but it minimizes chances of exposure to hazardous materials and radiation.

Sounds good! What's the catch?

Actually there isn't one.

We are constantly looking to the future, and for new ways to be efficient, safe and productive. That's why we look to people like you to help us get there. We offer great benefits, salary packages and further career opportunities to those who make the grade. Our standards are high and the training is hard, but our work environment brings out the best in people and puts their energy to good use!

YOUR FUTURE AS A: Control Technician

What do I need?

To be considered, you will need one of the following:

- A Grade 12 Ontario Secondary School Diploma (or equivalent), plus completion of a minimum two-year recognized community college program in Electrical, Instrumentation & Control or Electronics. Experience in any of these fields would be considered an asset.
- A Grade 12 Ontario Secondary School Diploma (or equivalent), plus completion of a Certificate of Qualification in Industrial Electrician, Construction & Maintenance Electrician, or Instrumentation Technician.

* Applicants must be eligible to work in Canada.

Applications

Resumes with a copy of the applicant's high school and college transcripts can be sent through the following websites:
